

Logistics that empowers

Quality Assurance – I / II

About Freight Tiger and the Opportunity

Freight Tiger has built India's largest unified freight network, which combines offline with digital to build an intelligent ecosystem for the road freight industry. This is revolutionary for a supply chain that is traditionally fragmented, offline, and time-intensive. As India aims to bring down logistics costs from over 14% to under 10% of GDP, Freight Tiger is positioned to be at the forefront of this ambitious endeavour.

Have you ever wanted to lead the success of a cutting-edge product that will change the very nature of an industry? We are looking for a top-of-class Product & Growth Marketing Lead to fuel our growth as we scale rapidly. This role is for those who like an open canvas to do their best work; we love off-the-wall ideas and are waiting to let you run with them.

Freight Tiger uses unique technology to solve operational problems for all stakeholders in the supply chain, from large-scale producers to individual drivers. It is truly neutral, which is virtually unheard of in the logistics industry. This will give you the opportunity to strategize for a vast variety of customers across a diverse range of product offerings. If you've always wanted to push your creative limits, this is the place for you.

What we need from you: deal well with ambiguity, resilience and grit, passion to market and position B2B technology products, and most importantly, lots of drive. What you'll get in return: a seat at the table at a growth-stage tech start-up with a brilliant team and massive potential.

The Nitty-Gritties

Location: Bengaluru

About the Role:

In this role, you will work on the test automation platform to enable testing across desktop and mobile devices. You will test production code both manually and with automated tools. You will perform the tests as pure black box testers, understand software internals, debug problems, and write automated tests with Java scripts. You will work with Software Development Engineers to understand features and technical implementation. A successful candidate must have a strong drive for results, have an obsession for high quality, must be a team player, and must have the ability to work in a fast-paced start-up environment.

Key responsibilities:

- Contribute to robust, scalable and high-quality test automation solutions.
- Review requirements, specifications and technical design documents to provide timely and meaningful feedback.
- Create detailed, comprehensive and well-structured functional, system, and regression test plans and test cases.
- Design, develop and troubleshoot automated test scripts to validate the technical and functional integrity of the web and mobile-based application components, backend API, and reports.
- You will understand the requirements and will write automation tests for integration, load, and performance.
- Conduct manual and automated testing of web application/PWA and backend services.
- Conduct both black and white box testing.
- Estimate, prioritize, plan and coordinate testing activities.

- Write and Implement Tests using Java or Python.
- Understand feature requirements, identify positive/negative test cases to verify feature functionality and document the test cases.
- Collect, analyze and interpret test metrics.
- Summarize test data and report findings.
- Liaise with internal teams (e.g. developers and product managers) to identify system requirements.
- Monitor debugging process results.

Preferred qualifications/skills:

- At least 2+ years of hands-on scripting (automation) in languages like - JavaScript, Java or Python
- In-depth knowledge of any automation tool like Karate, Cucumber, TestNG, Puppeteer, and Selenium.
- 3-6 years of experience in testing.
- Exposure to best practices in SQA and software development, including code reviews, debugging, troubleshooting and CI/CD processes.
- Experience in API testing using POSTMAN or any REST API testing tool.
- Experience in Functionality, Compatibility, Integration, and Regression Testing.
- Good knowledge in writing SQL Queries and understanding of Complex SQL Queries.
- Hands-on experience in white-box testing, black-box testing, test case execution, result generation, status reporting, defect reporting, regression testing, JIRA.
- Strong in Core Java fundamentals and Object-Oriented Programming concepts
- Experience in writing clear, concise and comprehensive test plans and test cases.
- Hands-on experience with functional and non-functional testing.
- Good communication and interpersonal skills.
- Be flexible and able to work in a fast-paced, dynamic environment.
- Be fast, efficient and able to juggle multiple projects.

- Should have worked on developing automation tools or frameworks to test Mobile/WebApplications/PWA.
- QA experience across multiple projects.
- Experienced in Agile or Scrum software development methodologies
- Good analytical, reasoning and problem-solving skills are required.
- Good to have experience working or testing with distributed architecture.
- Excellent communication skills with the ability to collaborate with a variety of audiences, both technical and non-technical.
- Hands-on experience in Linux/Unix commands is a plus.

We offer a competitive salary, equity, and a quality health insurance plan.
